

City Sports Boston Massachusetts

The Challenge

To develop a set of durable shipping cases for the transportation of cash registers, credit card readers, receipt printers, and accessories for use at marathon expos nationwide. The cases were needed to replace multiple cardboard boxes, to prevent the loss of components, and to provide easy inventory of components when repacking. City Sports needed the cases to be field-deployable, wheelable, trasportable, and easy for the staff to handle.

The Solution

Cases-Cases designed, prototyped, and fielded a rolling shipping case utilizing a standard Pelican 1640 case with a custom, multi-layer foam interior for the merchandising kit. The internal foam system was designed with rugged polyethylene foam. All cavities were sized and located for easy inventory of kit components and for the protection of the high-value contents. The design allowed for all of the components to ship pre-wired for easier setup at the expos. To easily differentiate the master sets from the slave sets of equipment, Cases-Cases designed the cases in different colors.

The Result

"The cases worked out great! We were able to setup and break down our equipment in a fraction of the time and I'm no longer concerned about the safety of the equipment during transport. I also got a lot of positive comments from our staff. Thanks again."
